

This simple DC brushed fan speed controller can provide you with the ability to regulate not only the fan speed and air volume, but also the noise and power consumption.

IE: you can run the fans at high speed when steaming out to your fishing grounds in your game boat. Then when trolling and the demand for the air volume is lower you can reduce the fan speed so the fan are quieter and power efficient.

- Manual Brushed DC Fan Speed controller 0-100% (no auto on this unit)
- FWD/OFF/REV Options via switch
- Max 20 amp output (i.e 1 only 12 inch 12v Mafi dc compact fan or 2 x 12 inch 24v)
- 3 year warranty

Please watch this [YouTube Video](#) for a demo on how this controller could benefit you.
